oo Nextcloud

The image displays three screenshots of the Nextcloud application. The top right screenshot shows the Nextcloud web interface with a sidebar for navigation and a main area for file listing. The middle left screenshot shows the Nextcloud mobile application on an iPhone, displaying a media folder with various files like PDFs and images. The bottom left screenshot shows another view of the mobile app, likely the home screen or a different folder.

Installation

First Run Wizard

admin login:

admin password: (leave empty to keep current password)

retype admin password:

data directory: /home/mjob/Projekte/owncloud-stable/1/d

force ssl:

enable automatic backup:

date format: j M Y G:i

No SQLite support detected, make sure you have both sqlite and the sqlite php module installed (sqlite and php5-sqlite for Debian/Ubuntu)

database type:

database host: localhost

database name: owncloud

database user: owncloud

database password: (leave empty to keep current password)

Hint: Mount it via webdav like this: [webdav://localhost/webdav/owncloud.php](http://localhost/webdav/owncloud.php)

Create an **admin account**

Username

Password

Storage & database▼

Finish installation

Nextcloud member

- notification for log-out-in for encryption has capitalization of App
- fix whitespace around embedded documentation
- notification icon in top right is white instead of black for bright theme colors [@juliusshaertl](#) [@nickvergessen](#) [#819](#) [nextcloud/notifications#9](#)
- server info: add link to endpoint (for external monitoring solutions) ([nextcloud/serverinfo#16](#))
- example files:
 - add user manual
 - nice video (mp4 of our intro)
 - add an about.odt and about.txt in documents
- server survey ([@schießle](#) will work on this stuff now, see [nextcloud/survey_client#2](#))
 - ownCloud
 - confirm button: send usage

The background of the image is a dark, moody landscape. It features a range of mountains in the distance, their peaks obscured by a thick layer of low-hanging clouds or fog. In the foreground, there are darker, more shadowed mountain slopes. The overall color palette is dominated by various shades of blue and grey, creating a sense of depth and atmosphere.

Nextcloud Mail

build passing Scrutinizer 8.11 coverage 55 %

An email app for [Nextcloud](#)

The screenshot shows the Nextcloud Mail interface. On the left, there's a sidebar with icons for New message, All inboxes, mail@ (redacted), Inbox, Favorites, Drafts, Sent, Archives, and Junk. The main area shows an inbox with several messages listed:

- Jan-Christoph Borchardt 20 minutes ago: When I Say I'm Working From Home (marked as unread)
- A [unread] 5 days ago: Re: Some buildout helpers
- [unread] 5 days ago: Some buildout helpers
- [unread] 5 days ago: noch ne idee?
- Jos Poortvliet 6 days ago: Re: Mail app status blog
- Jos Poortvliet 6 days ago: Re: Mail app status blog

On the right, a message from Jan-Christoph Borchardt to Steffen Lindner is displayed:

When I Say I'm Working From Home
Jan-Christoph Borchardt to Steffen Lindner

Hey,

you need to see it in motion:

<http://tinyurl.com/h6ay8wr>

Greets,
Jan

Concise feature list

Why is this so awesome?

-  **Integration with other Nextcloud apps!** Currently Contacts, Calendar & Files – more to come.
-  **Multiple mail accounts!** Personal and company account? No problem, and a nice unified inbox.
-  **Send & receive encrypted emails!** Using the great [Mailvelope](#) browser extension.
-  **We're not reinventing the wheel!** Based on the great [Horde](#) libraries.

And in the works for the [coming versions](#):

-  Proper grouping of message threads
-  Caching to make everything faster
-  Even better attachment support
-  Folder management & moving mails

How to set it up?

Developer setup info

Just clone this repo into your apps directory (Nextcloud server installation needed). Additionally, [nodejs](#) and [npm](#) are needed for installing JavaScript dependencies.

Once node and npm are installed, PHP and JavaScript dependencies can be installed by running

```
make install-composer-deps  
make optimize-js
```

Talk about design!

Publish updates

Nextcloud design team updates! :)

We had a great design workshop at the Nextcloud Conference in Berlin! There we discussed the current design process and how to improve it even further.

Starting out we talked about how our process works currently, what we like about it, and what is happening at the moment:

- The process is already pretty open, a lot more advanced than other projects
- Everything looks very coherent, lots of apps are already properly designed
- Feedback from designers is quite helpful
- Good design issues, lots of interest
- [Design label](#) is very useful (also in other repositories)
- [Cool new stuff happening in theming](#) (by Julius)
- [Calendar](#) design work is coming along (by Raghu)
- [Website redesign](#) is in the works & awesome (by Paulo)
- New Android app improvements work nicely (by Andy & Tobias)

Address questions

How is a design decided on?

- Consistency with existing apps, components and interaction design
- Review of existing solutions, other software people use
- Input from designers and design-minded developers
- No decision bottlenecks! Sure there is Jan but don't be blocked 😊

How to approach a new feature?

- Ideally involve design from the very beginning
- If it's very small, feel free to already work on it
- Ideal is something visual: either a mockup or prototype
- Design also always happens in the respective repository issue tracker, no separate design repo

Where is design help needed? / How do I ask for design help?

- Check out the **design** label in the repositories
- Also **combined with the starter issue label** for easy issues to get into Nextcloud
- And lastly **the papercut label**: for small issues which are often encountered but relatively easy to fix, hence providing a big UX improvement

Registration Open for Nextcloud Conference 2017!

WE COME UP WITH:

Focus will be on coding, design, front-end work and testing. Coding is important as well so there will be a chance for

-
